

Suzuki LTZ400 Flange Mounting Template

Follow the instructions below to correctly drill 3 new mounting holes in your airbox when installing the aluminum flange. (Kit # 153909c)

- 1) Cut out the circular template shown below, including the inner shaded area
- 2) Remove airboot from airbox, and place template over newly exposed round inlet
- 3) Line up the 3 cutouts on the template with the 3 raised hash marks on the outside of the round airbox inlet
- 4) Using a 1/4" bit, drill 3 new mounting holes in the airbox where the 3 drill points indicate on the template
- 5) After the new mounting holes have been drilled, place aluminum flange inside airbox and secure with the provided hardware, making sure to coat the threads of all fasteners with loctite

****BE SURE TO REMOVE YOUR STOCK BACKFIRE SCREEN IN THE AIR BOOT****
