

Yamaha Raptor Flange Mounting Template

Follow the instructions below to correctly drill 3 new mounting holes in your airbox when installing the aluminum flange. (Kit # 152917)

- 1) Cut out the template shown below, including the inner shaded areas
- 2) Remove airboot from airbox, and place template over newly exposed round inlets
- 3) Using a 1/4" bit, drill 3 new mounting holes in the airbox where the 3 drill points indicate on the template
- 4) After the new mounting holes have been drilled, place aluminum flange inside airbox and secure with the provided hardware, making sure to coat the threads of all fasteners with loctite
